

# Motus Wildlife Tracking System

[Motus logo 06-26-2014-01.jpg](#)

The Motus Wildlife Tracking System (Motus) is a coordinated network of radio-telemetry arrays managed under a common database that facilitates tracking movements and behaviours of small organisms at local, regional, or even hemispheric scales.

If you are interested in becoming a collaborating partner with Motus, or would like more information, visit [www.motus.org](http://www.motus.org) or contact [motus@birdscanada.org](mailto:motus@birdscanada.org).

Motus is a program of Bird Studies Canada in partnership with collaborating researchers and organizations. A complete list of all of our partners and supporters is available at [www.motus.org](http://www.motus.org).
